Main Function

Use AsciiCode Function

For example:

```c
#include <ctype.h>   //New library for toupper and isalpha

void main()
{
        char cTemp = 'c';   //lowercase alpha character

        int iAsciiCode;

        int iToken = 4;

        if(isalpha(cTemp))

        {

                cTemp = toupper(cTemp);

        }

        iAsciiCode = (int) cTemp;  //get the asciicode of the character stored in cTemp

        cTemp = iAsciiCode + iToken;  //replace the character, iToken characters away

        printf("%c", cTemp);

        return 0;

}
```

Code to Run:

To compile the program $

gcc -Wall PasswordEncoder_01.c -o PasswordEncoder_01

To run the program $

./PasswordEncoder_01
